

NATURE'S FREE PEST CONTROL!

**DRAGONFLIES, DAMSELFLIES AND SPREADWINGS:
BEAUTIFUL AND BENEFICIAL**

**THURSDAY, JUNE 12, 7-8PM
UPTON COMMUNITY CENTER**

PHOTO CREDIT-JOY MARZOLF

You have probably seen them flying in your yard or other outdoor spaces. What are these insects doing there? One thing is pest control! Find out more about these beneficial insects with naturalist and educator, Joy Marzolf.

Joy has a talent for presenting the natural world in a way that gives an understanding about the ecosystem and the many creatures that exist in its complex network. She does it with humor and makes it easy to understand at all levels.

She will answer questions like: “What is the difference between a dragonfly and damselfly?”, “What do they eat?” and “How do you tell males from females?”

Enjoy beautiful images and learn more about these amazing flyers and how their presence in our neighborhoods can benefit all of us!

The program is free of charge with thanks to the Upton Selectboard. Sponsored by Upton’s Mosquito and Tick Control Board with support from The Friends of Upton State Forest.
